

Hugging Face

Spaces

SF3D is a state-of-the-art method for 3D mesh reconstruction from a single image. This demo allows you to upload an image and generate a 3D mesh model from it.

All three sides

Model

Built on the architectural foundation of Qwen3.5, Qwen3.8 delivers substantial gains across coding, professional work, research, and long-horizon agentic tasks. Qwen3.8-27B brings these advances to a compact, deployment-friendly dense model: a native vision-language model that understands images and videos, with flexible thinking control, designed to carry complex, multi-step tasks through to completion with greater reliability.

Colab

Note: pipeline("summarization") errored in this Colab environment (KeyError, task not registered). Worked around it using AutoModelForSeq2SeqLM directly.

Default model (distilbart-cnn-12-6): "Hugging Face is a pioneering open-source AI platform that empowers developers, researchers"

kobart-summary-v3 (Korean model, on English text): "Hugging Face is a pioneering op" - essentially a truncated echo, not a real summary, since the model isn't trained for English.

Own choice model: English -> French Translation

Model: Helsinki-NLP/opus-mt-en-fr (distinct from the sentiment model used for the model-details lookup above).

All three test sentences were translated into grammatically correct, natural French, confirming the model performs well within its trained language pair.
